

Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called "Father" and derived class called "Son" which extends the base class. In Father class, implement a constructor which takes the age and throws the exception WrongAge() when the input age<0. In Son class, implement a constructor that takes both father and son's age and throws an exception if son's age is >=father's age.

CODE

```
import java.util.*;
class Wrongage extends Exception
{ int detail;
  Wrongage(int d)
  {
    detail=d;
  }
  public String toString()
  {
    return "Entered Wrong age is ["+detail+"]";
  }
}

class Father {
  int f;
  Scanner in=new Scanner(System.in);
  Father()
  {

    System.out.println("Enter father age ");
    f=in.nextInt();
  }
  void checkage() throws Wrongage
  {
    if(f<0)
    {
      throw new Wrongage(f);
    }
    System.out.println("Father age positive");
  }
}
```

```
class Son extends Father{
int s;
Scanner in=new Scanner(System.in);
Son()
{
super();
System.out.println("Enter son age ");
s=in.nextInt();
}
```

```
void checkages() throws Wrongage
{
super.checkage();
if(s<0)
{
throw new Wrongage(f);
}
System.out.println("Son age positive");
}
```

```
void checkage() throws Wrongage
{
if(s>f)
{
throw new Wrongage(s);
}
System.out.println("Father-Son age correct");
}

}
```

```
class Newdemo{
public static void main(String args[])
{

int f,s;

Father fath=new Father();

Father r;
r=fath;
```

```
try{
r.checkage();
}
catch(Wrongage e){
System.out.println("Father's age is wrong"+e);
}
Son sn=new Son();
r=sn;
```

```
try{

sn.checkages();
r.checkage();
}
catch(Wrongage e){
System.out.println("Son's age is wrong"+e);
}
}
}
```

OUTPUT

Command Prompt

```
C:\Users\Admin\Desktop\cs255>javac Newdemo.java
```

```
C:\Users\Admin\Desktop\cs255>java Newdemo
```

```
Enter father age
```

```
50
```

```
Father age positive
```

```
Enter father age
```

```
50
```

```
Enter son age
```

```
30
```

```
Father age positive
```

```
